

## Creating an Image with Deploy Studio

<http://www.deploystudio.com/Home.html>

- Boot the computer (that you want to create an image of) off of an external hard drive.
- Launch Deploy Studio Runtime either from the dock or from /Applications/Utilities.

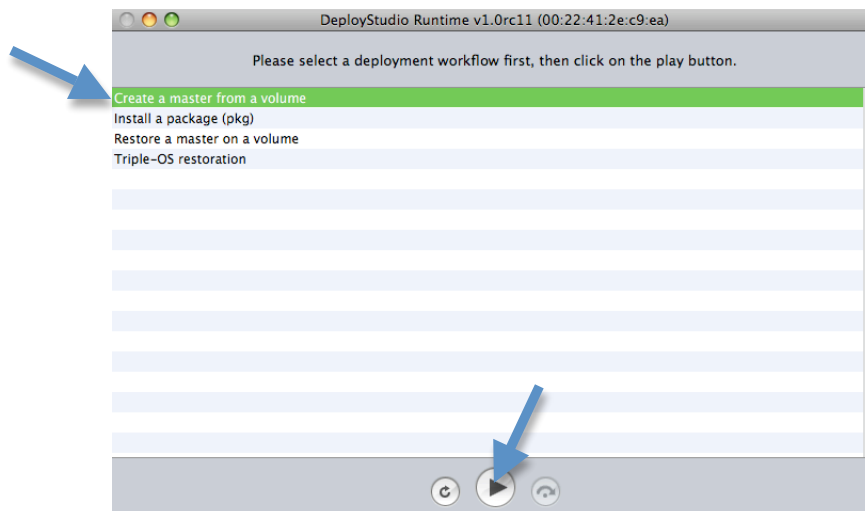

DeployStudio Runtime

- On the login window to the program enter one of the following:

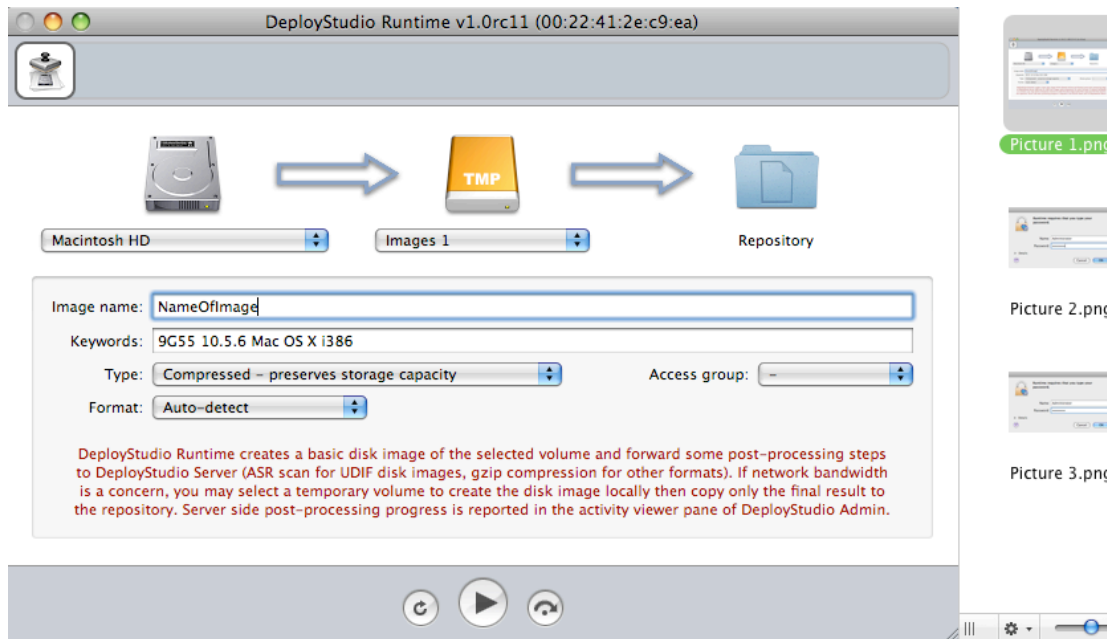

A screenshot of the DeployStudio Runtime login window. The 'Server address' dropdown menu is set to 'http://localhost:60080'. The 'User name' field contains 'admin' and the 'Password' field is masked with seven dots. A checked checkbox labeled 'Remember password in Keychain' is visible. At the bottom, there are 'Cancel' and 'Connect' buttons.

A screenshot of the DeployStudio Runtime login window. The 'Server address' dropdown menu is set to 'http://127.0.0.1:60080'. The 'User name' field contains 'admin' and the 'Password' field is masked with seven dots. A checked checkbox labeled 'Remember password in Keychain' is visible. At the bottom, there are 'Cancel' and 'Connect' buttons.

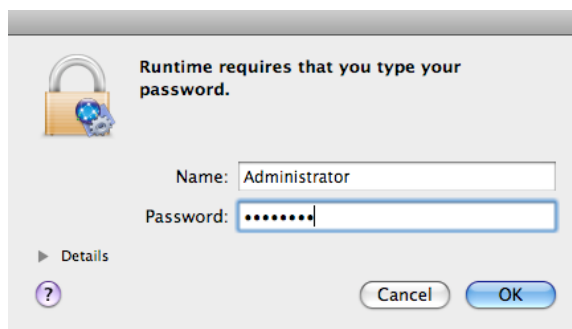

- Click Connect.
  - Note: Sometimes localhost works and sometimes it doesn't. If you set remember password, you might still have to type in 127.0.0.1.
- On the Workflow window select Create a Master from a Volume. Click on the Play button at the bottom of the window.

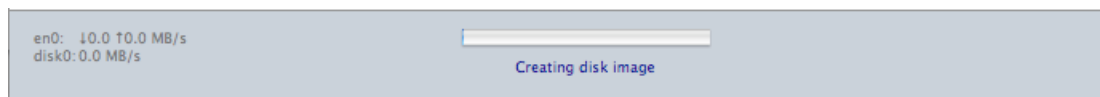

- On the next window select the Macintosh HD from the first pull-down menu. Select Images from the second pull-down menu. Under Image Name, provide a name of your image. Make sure Type is Compressed – preserves storage capacity. Click the Play button at the bottom of the window.

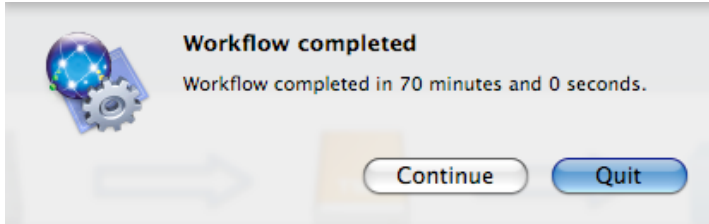

- When you are asked to Authenticate, type in the Administrator's username and password, then click Ok. You will have to Authenticate twice.

- DeployStudio will now start creating the image.

- After DeployStudio is finished creating the image, click Quit.

- After the image is created, it can be found in the /Volumes/Images/DS/Masters/HFS folder.
