

Cut only the *outline* of the stamen tube

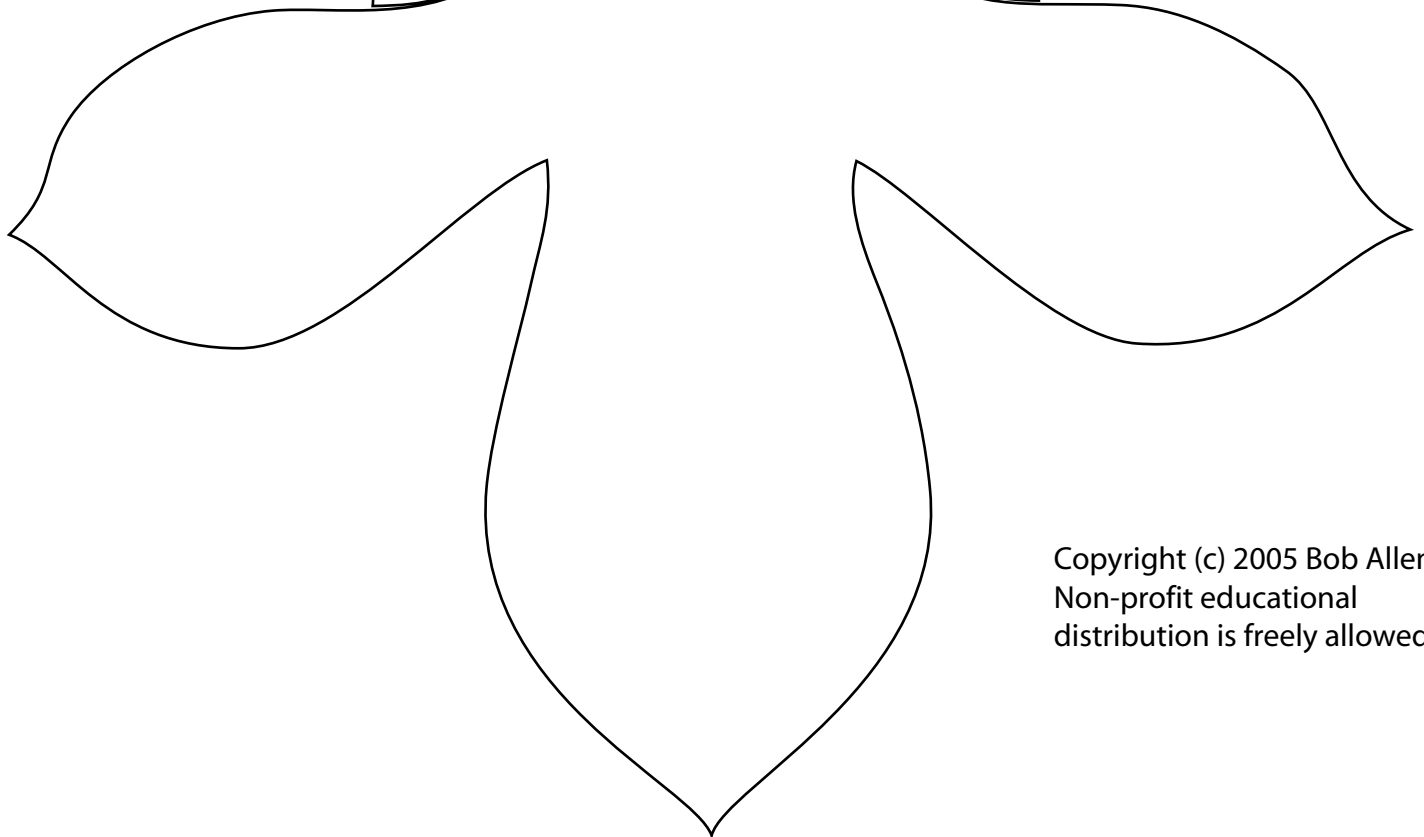

### **Rothrock Lobelia**

*Lobelia dunnii* var. *serrata*  
Bellflower Family  
Campanulaceae

Cut out the stamen tube, roll it around a pencil for shape, tape it together, and remove the pencil. A flexi-straw can be used instead of this paper version.

Cut out the flower. Roll the rectangular part into a tube but do not tape it yet. Slide the completed stamen tube through the flower tube and be sure that it passes through the circular opening just behind the upper petal lobes.

Slide a pair of fuzzy pipe cleaners through the stamen tube until it exits the tube above the upper petal lobes.
