

Converso

by VietoSoft

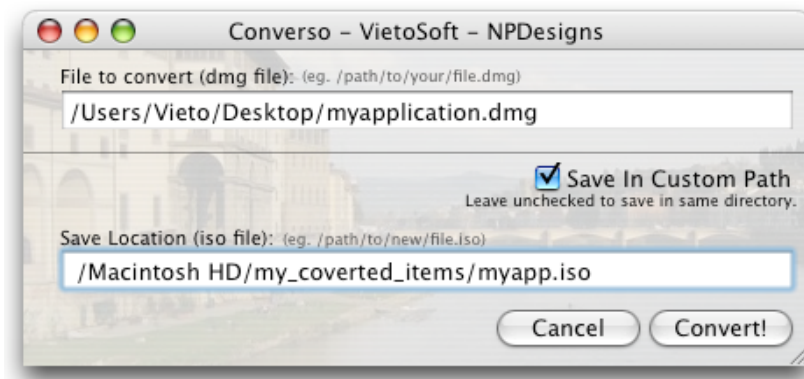

How To Convert DMG Images:

- 1) Type the path of the image to convert in the "File to convert" field, you can also drop the file into the text field from the Finder.
- 2) Click "Convert!"
- 3) An image is then created in the same directory with the same name in ISO format with the .iso extension.

How To Convert DMG Images To Custom Locations:

- 1) Type the path of the image to convert in the "File to convert" field, you can also drop the file into the text field from the Finder.
- 2) Click the "Save In Custom Path" button.
- 3) Enter the path of the new ISO in the "Save Location" field, be sure to put the name of the new image with the ".iso" extension as shown below.

Using Converso Via Command Line (UNIX Terminal In OS X):

- 1) Open Terminal In "/Applications/Utilities/Terminal"
- 2) In A Shell Type The Following

```
Welcome to Darwin!
```

my-mac: ~ yourname\$ **converso**

3) Follow the onscreen instructions.
