

# Why is a home from SIP Building System so ECO-Sensible?

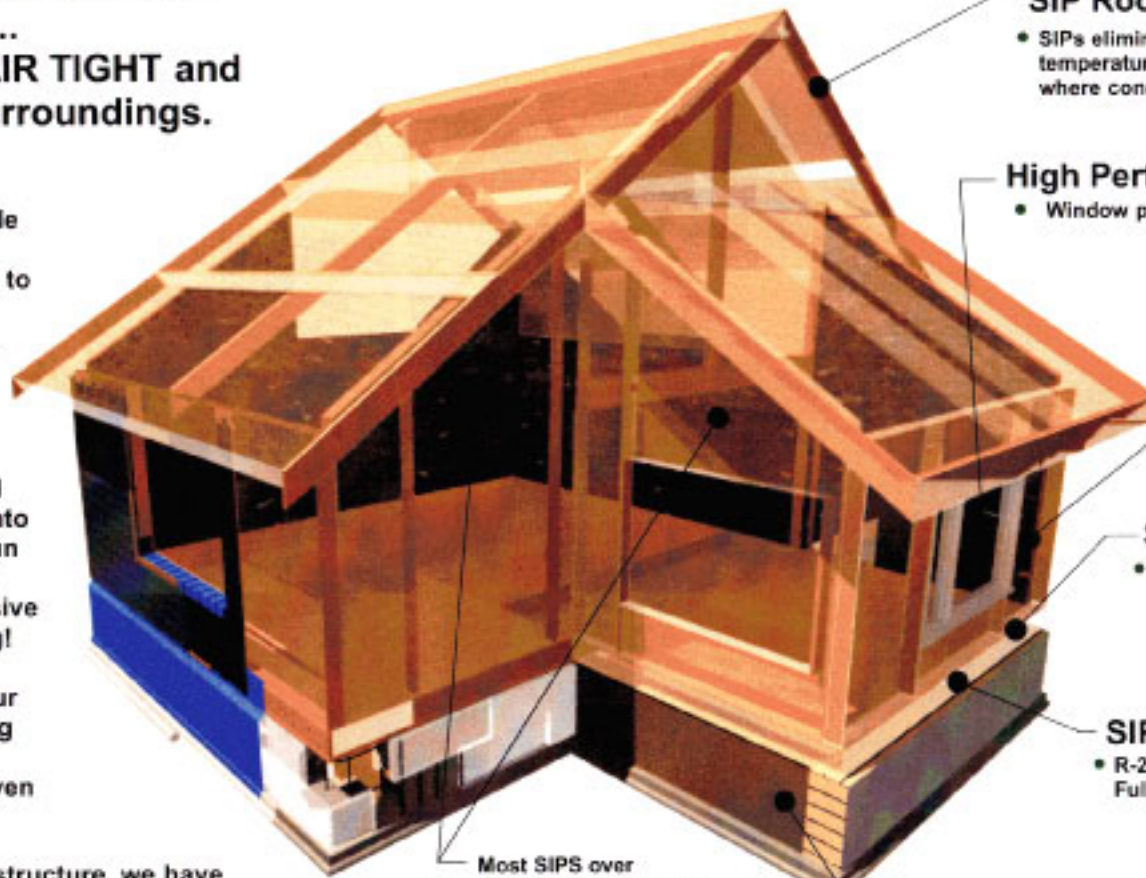

Structural Insulated Panels and a warm dry foundation...  
Build WARM, Dry, & AIR TIGHT and get control of your surroundings.

When you use SIP Building System' your ensured EnerGuide certified energy efficiency and dollar savings. In fact enough \$ to recover the entire cost of your structure over a 25 year period.

Sure money is important, but there is more in it for you than savings. You get a high comfort home with total control over the quality of air coming into your home. If you have good sun exposure we can optimize your new or existing design for passive solar gain and summer shading!

Sleep well at night knowing your surrounded by a certified strong and stable home built using technology developed and proven in homes since 1952.

Completing our pre-fabricated structure, we have performance optimized engineered wood floor systems; Timber posts-beams & braces; Pre built stair systems; Pre-applied and sealed ceiling and soffet finishes.

## SIP Roof System

- SIPs eliminate most thermal bridging keeping temperature extremes outside -not in your attic where condensation often occurs.

## High Performance Windows

- Window pane R values from R4.17 to R12

## SIP Wall System

- 6 1/2" thick provides true system R-24 insulation without thermal bridging losses from framed walls using wall studs

## SIP Floor System

- Keep your feet warm with 10 1/2" floor R-40 insulation

## SIP Insulated Rim Board

- R-24 insulation and air tight floor band Fully insulated, stronger and more stable

Most SIPs over window and door openings act as their own header and keep full R24 insulation performance.

## WARM and DRY Foundations

- ARXX Insulated Concrete Forms
- UNDERSLAB insulation for crawl or slab on-grade
