

MARKUP LANGUAGE:

Lab One

Using Text Edit on a Mac, create a text document. This document needs to be at least ten sentences of content in two paragraphs, plus the paragraph with the photo. Use the markup shown at left exactly as it is shown. Note: the last paragraph is all markup so it has to be entered exactly the way you see it here.

Before you save the document format it as a text document (see figure one.) Name that paragraph markup.html. Then use Fetch to FTP the file to the web server. Last, create a blog post with a link to your new web page.

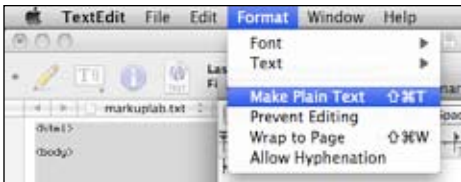

FIGURE ONE: You must convert the document to Plain Text before you save it.

FIGURE TWO: Save the file as markuplab.html and leave the encoding as the default.

FIGURE THREE: If you are alerted, choose the Use .html option .

```
<html>
```

```
<body>
```

```
<h1>My name is first_name last_name</h1>
```

```
<p>This is a little about myself. Type at least ten sentences in at least two paragraphs. End each paragraph with the closing tag and begin the next paragraph with the appropriate opening tag.</p>
```

```
<p>These paragraphs should be longer than what you see here.</p>
```

```
<p>I am a student at SJSU. Here is a picture of Tower Hall at San Jose State University:</p>
```

```
<p></p>
```

```
</body>
```

```
</html>
```
