

Dual Extremis 6.8 Push-Push Woofer

V 0.9

designed & drawn by David Dlugos
23 - february - 2007

0/ drawn with 3/4" material... should be 18 & 12 (or 15) mm (so only internal dimensions supplied at this point)

1/ intended to get drivers up as close to satellites as possible

2/ slot port can be aperiodically damped if room gain gives too much lift (6 dB/octave room gain starting at 90 hz gives a modeled flat to +3 dB response to 23 hz)

3/ red braces are swiss cheese (not shown)
